The ActiveX file compatibility checker will check whether a file (that's on a remote system) is compatible with ActiveX (that's on the local system). The ActiveX checker is useful to prevent crashes when using the wrong version of ActiveX technology in the local file manager and in the ActiveX component in a web browser. The ActiveX file compatibility checker installs a local ActiveX profile on the local system with the same attributes and version of the remote file. After installing the profile, the ActiveX file compatibility checker shows all files (files which are stored on the remote system) which are incompatible with the

active profile. These files are located in the C:\Program Files\ActiveSync folder (or C:\Program Files\Windows Live) and have a name starting with "old", "old\_" or "old\_2". The ActiveX file compatibility checker is useful to prevent crashes when using the wrong version of ActiveX technology in the local file manager and in the ActiveX component in a web browser. The ActiveX file compatibility checker is a great tool to check the ActiveX compatibility of files located in remote servers. Visual Basic 2003 SP1 includes the following new features: New free types for DataSet, Expando Object, ICollection, and IDictionary. These types are part of the .NET Framework 2.0. An easy and convenient way to make these types available to VB applications is by using the Visual Basic Project Template. A project template is a template that contains all the files that make up an application. The update has two main components: 1) a compilation or registry key switch to indicate to Visual Basic that the system has the new compiler available, and 2) a custom Visual Basic component that can be loaded in a Visual Basic application. This component adds the new data types, and copies the VCredist.exe file and the Common controls files that are part of the Visual Basic 2003 SP1 SDK. The product is free for the first 1 million installs. At the time of writing, the feedback on this product has 3a67dffec
